RIESS truehomeware – handmade in Austria and CO2-neutrally produced

Real enamel pots from RIESS are cult objects far beyond Austria's borders.

This nostalgia has been reissued for today's kitchens: Clean lines, simple materials and strong colours for organically and sustainably-minded people.

It takes 35 steps for the RIESS team to produce an Aromapot ready for the kitchen. Each product is carefully examined by hand before it leaves the production site in the Mostviertel of Lower Austria.

The manufacturing uses pure natural 'mineral resources' such as steel, quartz, clay, feldspar, borax, soda ash and potash - making enamel 100% recyclable. It is produced CO2-neutral with the company's own waterpower plants. A natural solution for natural foods!

Enamelware provides an array of advantages and with careful use can last a lifetime. Enamel is highly up-to-date.

RIESS truehomeware – Aromapots designed by dottings

The Aromapot

The Aromapots are 100% steel and enamel, and there are no screwed plastic parts. Therefore the pots can be used at high temperatures in the oven and on any stove ... gas, electric, halogen and ceramic hobs. Its magnetic properties make the series ideal for any modern induction stove!

The conical shape of the Aromapots makes the series stackable to save space.

During cooking, the lid – reversed and set aside – serves as a temporary bowl or plate for ingredients, spoons etc. Later at the table, it takes on the role of a trivet.

The Aromapots are deliberately designed in a simple and restrained style. Enamel lasts forever with careful use - therefore the stylistic vocabulary should too.

The inside of an Aromapot is white to show the natural shades of food. The outside of the pot is coloured depending on your appetite, and inspires an individual arrangement of cookware and dishes.

The Leather Potholder

The use of potholders is warmly recommended. Through perfect heat conduction, meals in the Aromapot receive heat from all sides – even from the lid. For better handling of hot dishes, suede leather potholders have been specially developed for the RIESS Aromapots. Equipped with heat-resistant anti-slip material, these potholders are the ideal complement to your RIESS Aromapots.

The high quality potholder is made from suede leather and is a purely natural product. The potholder is machine washable up to 40°C.

The Steamer

The remarkable efficiency of the set is completed with a steamer, which also works as a strainer.

The steamer can be used in combination with the Aromapots Ø 20cm pot.

DESIGN by dottings

„Democratic design for pots - beautiful, functional cookware for every home“ (Sofia Podreka and Katrin Radanitsch of dottings) Inspired by the pure enamel material and its possibilities, the designers of dottings created the new Aromapots for RIESS. Good tools for cooking and cooks - a pure, elegant series has emerged that embraces the spirit of tomorrow.

Accompanying the project from concept to production stage, dottings brings the organic idea of Riess Aromapots to life. www.dottings.com

DAS UNTERNEHMEN

A family business for over 400 years, RIESS manufactures its comprehensive range of products in Ybbsitz, on the famous ‚Iron Road‘. The energy required for this traditional business comes from three hydropower plants and the passionate commitment of its employees. For generations, the Riess family and their team have demonstrated a dedication to quality. An important response to the needs of the region and the environment. Today, RIESS is one of the few makers of distinctive quality enamelware in Europe. www.riess.at www.truehomeware.com
